

# Become the **MS Dhoni** of Programming

Be part of the  
CSK- Coding Super Kings Team

“

# *Practice Regularly*

”

- Coding is a skill that requires consistent practice and effort.
- Just like MS Dhoni spends hours every day practising cricket, coders need to dedicate time and effort towards developing their coding skills.

“

# ***Be Patient & Persistent***

”

- *Coding requires patience and persistence, as it can take a long time to solve complex problems and write efficient code.*
- *Developing a growth mindset and understanding that mistakes and failures are opportunities for learning is key to success in coding. Dhoni has been resilient in his approach being a Coder be Ziddi in your approach !!*

“

# Stay Calm Under Pressure

”

- *Debugging and troubleshooting are an integral part of coding, and they can be stressful and frustrating as sometimes is the pressure in cricket matches!*
- *Staying calm under pressure and having a problem-solving mindset is essential for finding the root cause of an issue and solving it effectively , Rock it as Captain Cool did and always does!*

“

## *Be a Team Player*

”

- Coding is often a collaborative effort, especially when working on larger projects so Be mindful as Dhoni with your tools and softwares.
- Being a team player, communicating effectively, and collaborating with others is critical for delivering high-quality software products, as Dhoni is with the team players.
